

A scatter plot showing the relationship between $-\log_{10}(p\text{-value})$ (y-axis) and $\log_{10}(\text{FC})$ (x-axis) for 1000 genes. The y-axis ranges from 0 to 4, and the x-axis ranges from -1.5 to 1.5. The plot displays a dense cluster of points in the top right corner, indicating high significance and fold change. A few points are scattered in the middle and bottom left.

Correlation Coeff. = 0.9355674380364233
R² = 0.8752864311140367
